

Network Security Monitoring

Threat detection that can monitor systems 24/7/365 and not miss a single packet.

Novaspect provides real-time threat monitoring with actionable data to protect your Industrial Control System (ICS). Even with fully staffed teams it can be difficult to identify and monitor new and existing assets, and identify if any of those assets are not behaving as expected. Novaspect's Network Security Monitoring (NSM) solution mirrors and passively monitors all network traffic to identify patterns and generating actionable alerts when new devices are detected or devices deviate from their normal behavior.

KEY COMPONENTS

- **Identify system assets** even when unauthorized components are connected to the wrong networks.
- **Visualize network communication** to provide system owners with a clear understanding of how their networks are segmented and how network controls are managing system data.
- **Detect network anomalies and risks.** During commissioning of the Threat Monitoring Solution, the control system baseline of communications is defined so that anomalies can be more easily identified.
- **Respond quickly to potential threats.** One of the key advantages to Threat Monitoring Solutions is the ability to prioritize events so that users can make informed and timely decisions.

Cybersecurity Packages

CORE

- Probe port provided on existing customer smart switches to send data to an existing threat detection solution deployed by others

ADVANCED

All core features, plus:

- Threat detection system deployed and integrated with controls systems onsite

PREMIUM

All core and advanced features, plus:

- Threat detection system deployed onsite and monitored by Novaspect personal for irregularities
